CORPORATE
SOFTWARE

Dear Valued Customer,

As part of our continuing program to offer Corporate Software customers the most up to date information on the products that we carry, Corporate Software is offering our dBASE III PLUS customers the opportunity to attend a free seminar on the dBASE development tool, Clipper.

Nantucket Corporation in conjunction with Corporate Software is sponsoring a nation-wide seminar, promoting the features and advantages of using Clipper for your dBASE program development needs.

Industry experts such as Tom Rettig, Basil Hosmer, and Neil Weicher will be explaining the advantages of using Clipper in both a single- and multi-user environment.
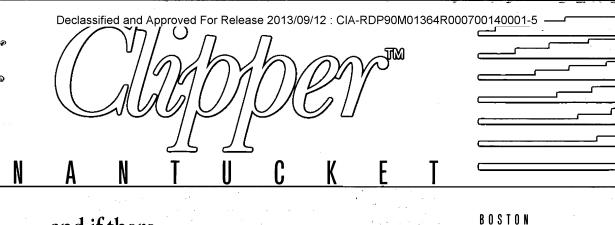

To attend any of the seminars, simply fill out the attached form and send it to Nantucket, or call Nantucket for additional information at (213) 390-7923.

Yours truly,

Morton H. Rosenthal
Chairman and CEO

Clipper™

NANTUCKET

...and if there wasn't Clipper, you wouldn't be getting the most from your dBASE development.

Attend our seminar and find out how the two work together.

Use new Clipper™ for your dBASE™ development and the following happens:

You produce more powerful, sophisticated applications...

Create menus, screens, windows, extended functions...

Compile programs, procedures, and format files into stand-alone applications.

All this up to 20 times faster than ever before.

Clipper lets you modify the source code of its powerful programming utilities to your individual tastes. You can write your own functions or utilize libraries of third party functions. And enjoy the freedom of open architecture, more fields, arrays and memory variables. Increased productivity is one of the benefits of Clipper. Cost effectiveness and source code security are others. But most important, the move to Clipper is easy and comes with accessibility to Nantucket's full range of support.

But we better stop here...otherwise there won't be any reason to attend our seminar.

We can't think of anybody more qualified in explaining Clipper to you than the leading industry dBASE experts who use it.

We're talking about *Tom Rettig, Basil Hosmer* and *Neil Weicher.*

Tom Rettig will show you how to free yourself from the confinements of dBASE.

UI's creator, Basil Hosmer, will talk to you about The UI Programmer and other programming tools for developers.

And Neil Weicher will instruct you how to network with Clipper.

Before the seminar is over, you'll know how easy it is to move to Clipper, and why you should be doing it now. And you'll see for yourself how much better and faster your dBASE development can be.
